lybamughees@gmail.com | 6479795494

Software Engineer with experience leading and delivering complex technical projects, including infrastructure automation and large-scale cloud migration initiatives. Proven ability to translate requirements into scalable solutions, manage priorities and timelines, and collaborate cross-functionally to drive successful project outcomes. Recognized for ownership, innovation, and delivering high-impact solutions in enterprise environments.

Work Experience

Cloud Automation Developer I

Apr 2025 - Present

Bell Canada | Mississauga

Led a large-scale VMware to OpenStack migration as Project Manager, driving end-to-end planning, execution, and cross-team coordination. Delivered significant cost savings, infrastructure optimization, and risk-free migrations while supporting cloud adoption through strong governance and documentation.

- Managed end-to-end migration of 610 servers, reducing infrastructure footprint by 50+ hosts
- Delivered \$8M in cost savings through optimization, strategic planning, and migration efficiencies
- Resolved 17 post-migration incidents with zero customer-impacting issues
- Coordinated tenant support, cutovers, validation, and readiness across multiple teams
- Authored technical documentation, playbooks, and operational guides to support cloud adoption
- Led after-hours migrations, weekly governance calls, and cross-functional alignment

Software Developer

May 2024 - Apr 2025

Bell Canada | Mississauga

Software Developer focused on automation and cloud efficiency, delivering scalable PowerShell solutions to optimize VM costs and improve license governance across enterprise environments.

- Led VM cost-optimization initiatives, driving measurable infrastructure and cost savings
- Analyzed and optimized ~2,500 VMs, recovering 120 hosts and \$161K in savings
- Built automation tools for license assignment and audit maintenance across enterprise systems

Software Development - Intern

Summer 2022/Summer 2023

Bell Canada | Mississauga

Software Development Intern contributing to enterprise internal platforms at Bell Canada, enhancing UI/UX, system auditability, and feature delivery using full-stack technologies.

- Redesigned the employee hub portal, improving UI/UX, usability, and functionality
- Implemented SQL-based logging to improve the auditability of employee directory updates
- Built internal tools for event publishing and enhanced existing systems using C#, ASP.NET, JavaScript, and SQL

Maintenance Strategies - Coop Student

May 2021 - Dec 2021

Ontario Power Generation | Pickering

Maintenance Strategies Co-op Student supporting data automation, analytics, and digital tools at a nuclear generating station. Delivered solutions improving spend visibility, maintenance efficiency, and compliance through VBA, SQL, Power BI, and Power Apps.

- Developed VBA automation to monitor and track vending machine purchases and spending
- Built Power BI dashboards and data models to visualize departmental expenditures
- Automated maintenance backlog tracking using SQL Server (SSMS) and VBA
- Created a Power App using Power FX to maintain station condition records
- Supported operational compliance with WANO nuclear standards

Skills

Programming Languages: C++, C, Java, PHP, HTML, JavaScript, CSS, Python, PowerShell, Bash

Data Analysis: SQL

Machine Learning / AI: Pandas, NumPy, Scikit-Learn, SciPy

Cloud & Virtualization: VMware

Tooling: Git, Power BI

Education

BS Engineering & Applied Science – Software Engineering: Specialization in Internet Of Things - Ontario Tech University - May 2024

Highest Distinction

Certifications: [IBM Data Science Professional Certificate](#) – 9 Courses (August 2020), The Science of Well-Being, Yale University (July 2020)

Awards & Achievements

Q3 Excellence and Innovation Award — Bell Canada (2025)

Awarded for outstanding contributions to the Evolving Network Cloud initiative, recognizing leadership in enabling a strategic VMware migration program and delivering self-service cloud automation across Bell.

1st Place, Ontario Tech University Capstone Exhibition for Electrical, Software, and Computer Engineering

Design and Development of Smart Medicine Cabinet

Addressed challenges faced by individuals with dementia in medication management, promoting independent living while adhering to medication schedules.
