lybamughees@gmail.com | 6479795494

Software Engineer pursuing a Master of Management in Artificial Intelligence at Queen's University, with experience delivering large-scale infrastructure modernization, automation, and cloud migration initiatives in enterprise environments. Proven track record of leading cross-functional technical projects from planning through execution, translating business requirements into scalable solutions, and driving operational efficiency through automation, combining technical engineering expertise with AI, data-driven decision-making, and business strategy to build scalable enterprise solutions.

Work Experience

Cloud Automation Developer I

May 2024 - Present

Bell Canada | Mississauga

Cloud Automation Developer responsible for managing a large-scale cloud migration, automation, and optimization initiatives. Managed end-to-end planning and execution for VMware to OpenStack migrations, drove infrastructure and cost savings, and developed scalable automation solutions to optimize VM costs and license governance.

- Managed migration of 610+ servers, reducing infrastructure footprint by 50+ hosts and delivering \$ millions in cost savings through optimization and strategic planning
- Coordinated cross-functional teams for tenant support, cutovers, validation, and post-migration readiness, resolving 17 incidents with zero customer-impacting issues
- Created technical documentation, playbooks, and operational guides to support cloud adoption and ongoing governance
- Led after-hours migrations, weekly governance calls, and ensured alignment across multiple teams
- Developed and implemented automation tools using PowerShell to optimize VM costs and automate license assignment and audit maintenance across enterprise systems
- Drove measurable infrastructure and cost savings through VM cost-optimization initiatives

Software Development - Intern

Summer 2022/2023

Bell Canada | Mississauga

Software Development Intern contributing to enterprise internal platforms at Bell Canada, enhancing UI/UX, system auditability, and feature delivery using full-stack technologies.

- Redesigned the employee hub portal, improving UI/UX, usability, and functionality
- Implemented SQL-based logging to improve the auditability of employee directory updates
- Built internal tools for event publishing and enhanced existing systems using C#, ASP.NET, JavaScript, and SQL

Maintenance Strategies - Coop Student

May 2021 - Dec 2021

Ontario Power Generation | Pickering

Maintenance Strategies Co-op Student supporting data automation, analytics, and digital tools at a nuclear generating station. Delivered solutions improving spend visibility, maintenance efficiency, and compliance through VBA, SQL, Power BI, and Power Apps.

- Developed VBA automation to monitor and track vending machine purchases and spending
- Built Power BI dashboards and data models to visualize departmental expenditures
- Automated maintenance backlog tracking using SQL Server (SSMS) and VBA
- Created a Power App using Power FX to maintain station condition records
- Supported operational compliance with WANO nuclear standards

Skills

Programming Languages: C++, C, Java, PHP, HTML, JavaScript, CSS, Python, PowerShell, Bash

Data Analysis: SQL

Machine Learning / AI: Pandas, NumPy, Scikit-Learn, SciPy

Cloud & Virtualization: VMware

Tooling: Git, Power BI

Education

Master of Management in Artificial Intelligence (MMAI) - Queen's University - May 2027

BS Engineering & Applied Science – Software Engineering: Specialization in Internet Of Things - Ontario Tech University - May 2024

Highest Distinction

Certifications: [IBM Data Science Professional Certificate](#) – 9 Courses (August 2020), The Science of Well-Being, Yale University (July 2020)

Awards & Achievements

Vector Scholarship in AI — Vector Institute (2026)

Q3 Excellence and Innovation Award — Bell Canada (2025)

Awarded for outstanding contributions to the Evolving Network Cloud initiative, recognizing leadership in enabling a strategic VMware migration program and delivering self-service cloud automation across Bell.

1st Place, Ontario Tech University Capstone Exhibition for Electrical, Software, and Computer Engineering

Design and Development of Smart Medicine Cabinet

Addressed challenges faced by individuals with dementia in medication management, promoting independent living while adhering to medication schedules
