lybamughees@gmail.com | 6479795494

Software Engineer pursuing a **Master of Management in Artificial Intelligence (MMAI)** at Queen's University with experience delivering enterprise cloud transformation, automation, and digital modernization initiatives across telecommunications and energy sectors. Proven ability to lead large-scale infrastructure migration programs, coordinate cross-functional technical teams, develop automation solutions, and translate business objectives into scalable technology outcomes. Strong foundation in cloud engineering, machine learning, data analytics, operational governance, and AI-driven innovation, with a passion for delivering enterprise technology solutions that improve operational efficiency, reliability, and business value.

Work Experience

Cloud Automation Developer I

May 2024 - Present

Bell Canada | Mississauga

Cloud Automation Developer responsible for enterprise cloud modernization, automation, and infrastructure optimization initiatives supporting Bell's Evolving Network Cloud program.

- Led end-to-end delivery of a large-scale VMware-to-OpenStack migration involving over **610 production servers**, coordinating planning, execution, validation, risk mitigation, and operational readiness across multiple engineering and operations teams.
- Delivered infrastructure optimization initiatives that reduced the environment by **50+ ESXi hosts**, generating **multi-million-dollar cost savings** through strategic planning and cloud modernization.
- Coordinated cross-functional engineering, operations, and tenant teams throughout migration planning, deployment, release execution, and post-migration support, successfully resolving **17 production incidents with zero customer-impacting issues**.
- Authored migration playbooks, operational procedures, governance documentation, and technical standards to improve delivery consistency, knowledge sharing, and operational excellence.
- Led after-hours migration execution, governance meetings, stakeholder communications, and status reporting while ensuring alignment with project schedules and operational objectives.
- Designed and implemented enterprise automation solutions using **PowerShell** to optimize VM lifecycle management, automate software license governance, improve audit readiness, and reduce manual operational effort.
- Collaborated with cloud platform, infrastructure, operations, and security teams to support enterprise modernization initiatives and continuous improvement efforts.

Software Development - Intern

Summer 2022/2023

Bell Canada | Mississauga

Software Development Intern contributing to enterprise internal platforms at Bell Canada, enhancing UI/UX, system auditability, and feature delivery using full-stack technologies.

- Redesigned Bell's internal employee hub, improving user experience, accessibility, and overall platform usability.
- Developed SQL-based logging capabilities to improve auditability and traceability of employee directory updates.
- Built internal enterprise tools supporting event publishing and administrative workflows using **C#, ASP.NET, JavaScript, HTML, CSS, and SQL**.
- Collaborated with cross-functional stakeholders to gather requirements, deliver enhancements, and support enterprise software initiatives.

Maintenance Strategies - Coop Student

May 2021 - Dec 2021

Ontario Power Generation | Pickering

Supported digital transformation initiatives through automation, analytics, and reporting within OPG's Nuclear Maintenance Strategies organization.

- Automated operational reporting and financial tracking processes using VBA, improving data accuracy and reducing manual effort.
- Developed Power BI dashboards and analytical reporting solutions to improve visibility into departmental expenditures and operational decision-making.
- Built SQL- and VBA-based automation tools supporting maintenance backlog management and operational planning.
- Developed a Power Apps solution using Power FX to digitize station condition records and improve information accessibility.
- Supported operational compliance with World Association of Nuclear Operators (WANO) standards through process improvements and data management initiatives.

Skills

Artificial Intelligence & Data Science: Machine Learning, Python, Scikit-Learn, Pandas, NumPy, SciPy, Data Analytics, Feature Engineering, Predictive Modeling

Cloud & Infrastructure: VMware, Cloud Migration, Infrastructure Modernization, Cloud Optimization, Infrastructure Automation

Automation & DevOps: PowerShell, Bash, Git, Automation Scripting, CI/CD Concepts

Data & Reporting: SQL, Power BI, Data Modeling, Reporting & Visualization

Programming Languages: Python, C++, C, Java, JavaScript, PHP, HTML, CSS

Professional Skills: Enterprise Technology Delivery, Digital Transformation, Cross-functional Collaboration, Stakeholder Management, Technical Documentation, Operational Readiness, Process Improvement, Business Analysis, Problem Solving, Agile Development Methodologies

Education

Master of Management in Artificial Intelligence (MMAI) - Queen's University - May 2027

BS Engineering & Applied Science – Software Engineering: Specialization in Internet Of Things - Ontario Tech University - May 2024

Highest Distinction

Certifications: [IBM Data Science Professional Certificate](#) – 9 Courses (August 2020), The Science of Well-Being, Yale University (July 2020)

Awards & Achievements

Vector Scholarship in AI — *Vector Institute (2026)*: Recipient of the prestigious Vector Scholarship recognizing academic excellence and leadership in Artificial Intelligence.

Q3 Excellence and Innovation Award — *Bell Canada (2025)*: Recognized for outstanding contributions to Bell's Evolving Network Cloud initiative, including leadership in enterprise cloud transformation, self-service automation, and strategic infrastructure modernization.

1st Place, Ontario Tech University Capstone Exhibition for Electrical, Software, and Computer Engineering - *Design and Development of Smart Medicine Cabinet*:

Awarded first place for the design and development of the Smart Medicine Cabinet, an AI- and IoT-enabled healthcare solution supporting independent medication management.
